# Densely Connected ConvNets DenseNet

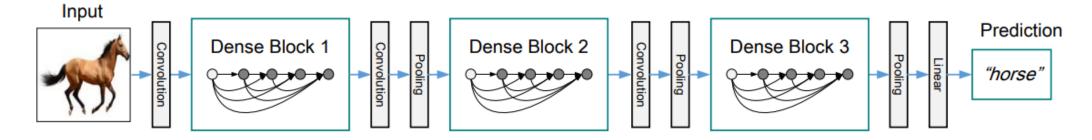

**Figure 1:** A 5-layer dense block with a growth rate of k=4. Each layer takes all preceding feature-maps as input.

ResNet의 아이디어를 계승하여 좋은 성능을 끌어낸 DenseNet을 알아보자.

### DenseNet 구조

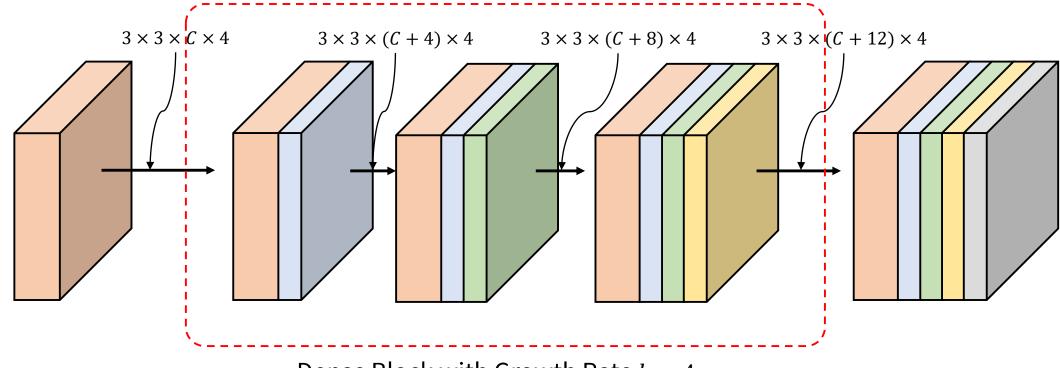

**Figure 2:** A deep DenseNet with three dense blocks. The layers between two adjacent blocks are referred to as transition layers and change feature-map sizes via convolution and pooling.

DenseNet은 ResNet 아이디어의 연장선에 있으며, Dense Block을 제안하고 있다.

Dense Block 내에서는 ResNet과 같이 Pre-Activation 구조 (BN-ReLU-Conv)구조를 사용한다.

#### **Dense Block**

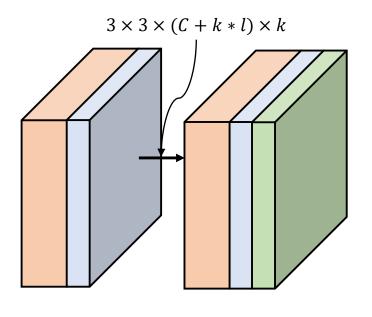

Dense Block with Growth Rate k = 4

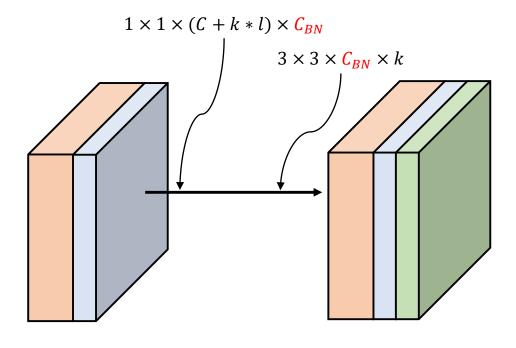

이리저리 연결된 Skip Connection이 자칫 복잡해 보일 수 있지만, 다른 관점에서 보면 이전 특징 맵에 누적해서 Concatenate하는 결과와 같다.

## Bottleneck 구조

일반 Dense block 계산

Bottleneck 구조

레이어가 깊어지면서 연산량이 급격히 증가하는 것을 막기 위해, 1x1 Conv를 이용한 Bottleneck Layer를 사용하였다.

**Table 1:** DenseNet architectures for ImageNet. The growth rate for all the networks is k = 32. Note that each "conv" layer shown in the table corresponds the sequence BN-ReLU-Conv.

논문을 보고 이를 구현할 수 있는 능력을 키우다 보면, 자기만의 네트워크를 설계할 수 있다.
